Grade 6 Answers

Science

Photosynthesis

- Plants, like all living things, need food.
- They make their own food.
- One of the main functions of the leaves is to make or manufacture food for the plant.
- This process is called photosynthesis.

During photosynthesis, plants take in:

- 1. Carbon dioxide (CO₂) from the air
- 2. Water and minerals from the soil

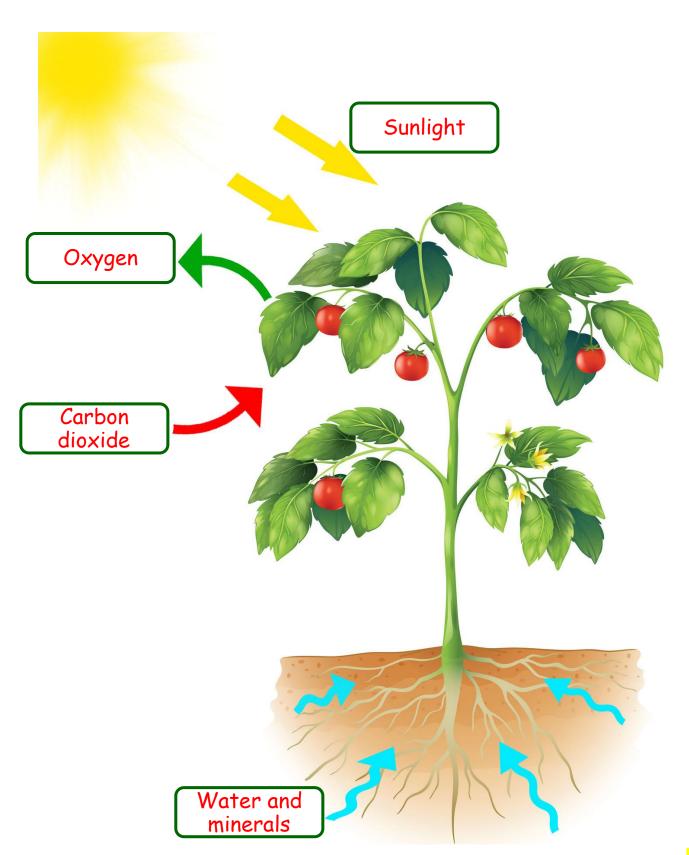

in the presence of

- 1. Sunlight
- 2. Chlorophyll (in green leaves)

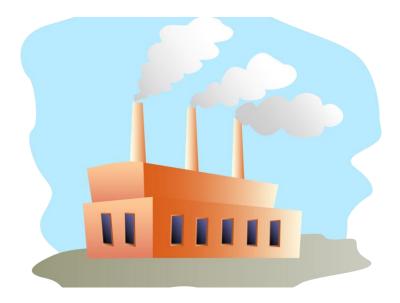

and release oxygen (O₂).

1. Label the diagram below showing photosynthesis. Use the following words:

Water and minerals , Oxygen , Carbon dioxide , Sunlight

2. The leaf is like a factory.

In a factory, materials called input, are brought to the factory and processed.

The finished product is called the output.

Using the following words, complete the diagram:
